

## Lab Instructions: Creating a Small Database Called `drlee`

In this lab, I will guide you through the process of creating a small Oracle database called `drlee` using the Database Configuration Assistant (DBCA) in silent mode. We will use a template similar to the provided example for `ORCL`.

### Prerequisites

- Ensure Oracle Database software is installed.
- Ensure Oracle environment variables are set ( `ORACLE_HOME` , `PATH` , etc.).
- Sufficient privileges to create and delete databases.

### Step-by-Step Instructions

#### Step 1: Create the `drlee` Database

##### 1. Navigate to the DBCA binary location:

```
cd $ORACLE_HOME/bin
```

##### 2. Execute the following command to create the `drlee` database:

```
./dbca -silent -createDatabase \  
-templateName General_Purpose.dbc \  
-gdbname drlee \  
-sid drlee \  
-createAsContainerDatabase true \  
-numberOfPDBs 1 \  
-pdbName pdb1 \  
-useLocalUndoForPDBs true \  
-responseFile NO_VALUE \  
-characterSet AL32UTF8 \  
-totalMemory 1024 \  
-sysPassword fenago \  
-systemPassword fenago \  
-pdbAdminPassword fenago \  
-emConfiguration DBEXPRESS \  
-dbsnmpPassword fenago \  
-emExpressPort 5589 \  
-enableArchive true \  
-recoveryAreaDestination /u01/app/oracle/fast_recovery_area \  
-recoveryAreaSize 5000 \  
-datafileDestination /u01/app/oracle/oradata
```

This command will create a new container database named `drlee` with a pluggable database `pdb1`. Adjust memory settings and file destinations as needed for your environment.

#### Step 2: Verify the Creation of `drlee`

##### 1. Check the status of the newly created database:

```
sqlplus / as sysdba
```

##### 2. Connect to the `drlee` database:

```
SELECT NAME, OPEN_MODE FROM V$PDBS;
```

Ensure that the `drlee` database and its pluggable database `pdb1` are listed and in the appropriate OPEN mode.

### Step 3: Delete the `drlee` Database

1. Navigate to the DBCA binary location (if not already there):

```
cd $ORACLE_HOME/bin
```

2. Execute the following command to delete the `drlee` database:

```
./dbca -silent -deleteDatabase \  
-sourceDB drlee \  
-sid drlee \  
-sysPassword fenago
```

This command will remove the `drlee` database from the system.

### Summary

In this lab, you have learned how to create and delete a small Oracle database named `drlee` using the DBCA in silent mode. You have also verified the creation of the database and its pluggable database. This process is essential for managing Oracle databases efficiently in various environments.
